Projects

Restaurant Billing Management System

- Created a Billing Management System for a newly opened restaurant, Using this software we were also able to keep track of inventories generating sales reports and printing bills in predefined format. In this restaurant I was working as a restaurant supervisor while pursuing my engineering degree. Owner was aware that I'm from computer background so he ask to build one. Tools and Technologies: Java, MySQL

Smart Traffic Management System

- IoT Project to manage heavy traffic queues at signal using IR sensor. This was our final year project in Engineering, project was created by me and my two friends, we have created this project to provide solution for a problem of heavy traffic jams at signal due unproper management, in this project we have used IR sensors to get length of traffic queue and set signal timing according to the traffic length. Tools and Technologies: Aurdino, C, IR Sensor

Website for Farmers

- A website for farmers was created as final year diploma project, where farmer can get farming related information district wise easily in multiple language. Tools and Technologies: ASP.Net

Quiz Competition Website

- A quiz competition website developed using PHP and MySQL as database.

Certifications

- Certificate in Web Component Development using Java Technologies
- Coursera Certificate in AWS Fundamentals: Going Cloud-Native
- Java (Basic) Certificate By Hacker rank, also got 5 Star Badge
- Professional Email Writing Course Certificate By Twenty19
- Participated in one day workshop on Big-Data & Hadoop, VIT Mumbai
- Participated at the onsite round in C Programming & FOSS-Python Contest, Mumbai University

Experience

Jan 2019 - Present **IT – Dialer Executive** OnePointOne Solutions, Navi Mumbai

- Working with internal development team for new changes in CRM.
- Managing data in SQL database, coordinating with operation.
- Started as CRE, promoted to IT in 6 month through IJP.
